

Available in lengths  
of 20 to 60 feet

Rated to -40°C

Enclosure Temps as  
High as 105°C

Serialized and  
Traceable

Meets Latest  
CSA Standards

***Did you know?...***

CSA requires the temperature rating of the electrical cord assembly to meet or exceed the internal air temperature<sup>1</sup> of your explosion proof electrical enclosure at its stated maximum operating temperature?

<sup>1</sup> Internal air temperature is not the T-Code, nor is it the actual process temperature. It is the actual air temperature within the enclosure at maximum operating temperature. This is normally determined by 3rd party testing, typically CSA in Canada.

**RC-CA Technical Specifications**

14/3 105°C 600 volt  
Caloprene Jacketed  
Type SOOW  
Class 1, Div 2, Group C & D

**Additional Items**

**Pressure Control**  
1 to 5000 PSI Range  
CSA Dual Seal Certified

**Low Pressure Control**  
1 to 30 PSI Range  
CSA Dual Seal Certified

**Isolation Valve**  
5100 PSI rated
